

helioconsult

Dear Business Partner,

it is a pleasure to present our first helioconsult Newsletter.

Starting from now on, we will send a newsletter every month to stay in touch with our customers and friends. Providing you the latest news about our company, services and exiting innovations from the renewable energy world.

To receive this newsletter in the future, it is necessary to confirm your address and your interest in getting this mail. Otherwise we are unfortunately not allowed by government regulations to provide you this service anymore.

Please hit the following button to make sure you never miss our latest news. You can terminate this service every time you wish.

We hope you will enjoy this newsletter and we wish you a very successful month!

Dr. Daniel Faltermeier
Managing Partner

This month's topics:

- Solar Project Due Diligence for less than 1000 EUR
- Power Purchase Agreements
- A brief look into our company
- Service throughout the entire lifecycle of a project

Solar Project Due Diligence for less than 1000 EUR!

We went into the classical Due Diligence process known for years for large solar systems and standardized the hole procedure. This compressed and very efficient process allows us to provide this service also to medium-size-projects up to 750 kWp where money is of the essence.

Our standard package already includes a yield forecast and the risk assessment for the main components, the stakeholders and the project at all. Specific risks are summarized in a kind of traffic light system. The data submission can be done directly on our webpage.

To make sure you only pay for what you really need, there are a couple optional packages available to add to the base package. For example a site visit, performance and contract evaluations are also available if required.

Nevertheless, this product is still highly adaptable to specific needs of portfolio customers, investment companies and banks. Also project owners participate from the widely accepted due diligence service when it comes to build, buy or sell projects.

To learn more visit our webpage www.helioconsult.com or watch our latest [YouTube video](#) talking about this topic.

Power Purchase Agreements

The times solar projects were only attractive to investors because of high feed-in tariffs are slightly over. A trend for many years in countries like the US, is now also coming to Europe. Especially in the Spanish market, but also in France, more and more solar and wind projects were developed and finally built without feed-in tariffs.

Also in Germany, were for a significant number of wind and solar projects, feed-in-tariffs are running out, energy will probably be sold under PPAs. With increasing electricity market prices, this trend is also accelerated for new systems.

But this also means, investors have to deal with the new situation, were individual contracts with the buyers are common. To avoid snares, a closer look into these contracts is necessary.

With our Due Diligence and Risk Assessments we also support you for your next PPA-project. Speak with our experts to get ready for the next game.

A brief look into our company

We are a 100% private owned company with no dependency to any manufacturer or service provider. Therefore we are truly independent with all what we do.

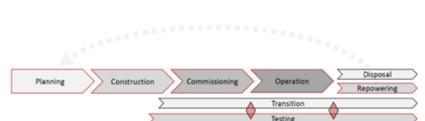

Our methods and services always use the highest scientific and sophisticated standards in the industry.

We are specialized in renewable energy production, distribution and efficient consumption. That is what we do and that is where we are good in.

Our experts have many years of experience in the industry and have supported hundreds of projects all over the world. It is the knowledge you participate from.

We are providing and connecting services, so you can be sure you always get the best in class, available solution out of one hand.

We are taking consulting and engineering to the next level. Being your holistic, independent partner for renewable energy solutions.

Service throughout the entire lifecycle of a project

A successful solar project starts at the very beginning with an idea. This is where we start supporting you with our sophisticated services and consulting throughout the entire lifecycle of a project, or just in one single Phase.

We make sure everything is perfect from the beginning. Even if there are sometimes risks and hurdles in a project, we are here to manage and overcome them together with you.

Learn more about our services for solar-systems any size, visit our [service section](#) on our webpage.
